

ITMA 2007 - Munich

A noteworthy and successful exhibition, which ended in Munich on 20th September and will be remembered positively.

Swisstex Machinery Inc. was able to present itself at this outstanding exhibition of technique and technology for the textile industry for the very first time. With more than 500 visitors from 42 countries to our booth and the numerous technical and technological consulting discussions, we can look upon it as a very successful event.

The display of a CPB Dyeing Padder for tubular knits as part of a complete plant attracted a great degree of attention with regard to the resources saving and the environmentally compatible technologies required in the field of textile finishing.

A great deal of space was also needed for the presentation of the engineering tasks that we have accomplished in the fields of complete projects, modernizations, and plant extensions.

We should like to extend our thanks to all those who visited our exhibition booth during the International Exhibition of Textile Machinery in Munich, and look forward to further opportunities for the continuation of our contacts.
